1. (Twice Amended) A method for receiving digital information and transmitting the

information in a localized area, comprising the steps of

receiving an audio communication as digital information from a remote source via the

Internet;

converting the digital information to analog information;

broadcasting the analog information at low power in a localized area in at least one

preselected radio frequency chosen by a user; and

receiving the broadcast information in the localized area on a radio frequency receiver

tuned to at least one frequency to permit listening to the audio communication.

5

11. (Twice Amended) An apparatus for receiving information and broadcasting the information in a localized area, the apparatus comprising:

means for receiving digital information from a remote source via the Internet; means for converting the digital information to analog information; and

means for broadcasting the analog information in a localized area in at least one

preselected radio frequency chosen by a user. 6

17. (Twice Amended) A method for receiving digital information and transmitting the information in a localized area, the method comprising the steps of: receiving digital information from a remote source via the Internet;

converting the digital information to analog information;

broadcasting the analog information in a localized area in at least one preselected

frequency modulated radio frequency chosen by a user.

21. (Once Amended) The method of claim 17, further comprising the step of: broadcasting the analog information in at least one preselected amplitude modulated

radio frequency.

Please add the following claims.

22. (Newly Added) The method of claim 1, wherein the user tunes the radio frequency receiver to the preselected radio frequency.

Jub 217

- 23. (Newly Added) The method of claim 1, wherein a different user tunes the radio
- 2 frequency receiver to the preselected radio frequency.
